- Debugging
- API knowledge
- Team Leadership
- Client Relations

PROFESSIONAL EXPERIENCE

University of Toronto - Calgary, Alberta | [Student](#)

2020 - Present

- Currently enrolled in the Full Stack Developer Coding Bootcamp program

Let's Go Travel Planner (University of Toronto) - Calgary, Alberta | [Student](#)

2021

- Successfully collaborated within a team for a group project. The focus of our project was to produce an online and dynamic itinerary creator. The website has a fully functional login system that takes advantage of the MySQL database. This website is a full CRUD application
- Users are able to search for a location by city name and in return, this action performs two separate API calls that generate a randomized list of restaurants and activities that the user can then save into their itinerary
- Implemented the following technologies: JavaScript, jQuery, MySQL, Sequelize, Passport, Bcrypt, Dotenv, Node Express, Handlebars, Bootstrap, Jest and Heroku
- [HTTPS://STORMY-SPRINGS-60842.HEROKUAPP.COM/](https://stormy-springs-60842.herokuapp.com/)

Weather Dashboard (University of Toronto) - Calgary, Alberta | [Student](#)

2020

- Was tasked with creating a dynamic Weather Dashboard that makes three different API calls to Open Weather Map
- This web application is able to generate the current weather for any city worldwide and can also display the forecast for the next five days
- Integrated local storage to enable the user to retain search history as well as to clear it
- The languages that were implemented were the following: HTML, CSS, Bootstrap, JavaScript, jQuery and Moment.js
- [HTTPS://HUSTINKAVA.GITHUB.IO/WEATHER-DASHBOARD](https://HUSTINKAVA.GITHUB.IO/WEATHER-DASHBOARD)
- [HTTPS://GITHUB.COM/HUSTINKAVA/WEATHER-DASHBOARD](https://github.com/HUSTINKAVA/WEATHER-DASHBOARD)

Code Quiz (University of Toronto) - Calgary, Alberta | [Student](#)

2020

- Was tasked with creating a Code Quiz alongside a timer with scoring being based on the remaining time
- An incorrect answer will result in the deduction of ten seconds from the timer
- The user will be able to continue completing the quiz when a correct answer is provided
- This application uses local storage to allow the user to enter their initials and store their high score
- The languages implemented were HTML, CSS, and JavaScript
